# Subject Index of Volume 47

Acetalisation
–hydroformylation reaction; Sn[Co-$(CO)_4]_4$, bifunctional catalyst of, 11
Acetic acid
further studies on Pd complex-catalysed methoxycarbonylation of bis-(chloromethyl)arenes; successful use of inorganic bases yielding arenediacetic acid derivatives, 41
highly efficient catalyst system for isomerization of methyl formate to, 117
Alcohol(s)
catalytic conversion of; olefin selectivity from 2,4,4-trimethyl-2-pentanol using metal oxide catalysts selective for Hofmann or Saytzeff elimination, 123
ethanol; carbonylation of, using homogeneous Ir complex catalyst; effect of ligands and reaction conditions, 87
liver, dehydrogenase; theoretical chemistry studies on catalytic mechanism of, 199
methanol; electrocatalytic reduction of $CO_2$ to; mediation with metal porphyrins, 51
saligenols; synthesis of salicylaldehydes by copper- or iron-catalysed selective dehydrogenation of, 59
Alkenes, Olefins
cyclohexene oxygenation; cytochrome P-450 models with electron transfer activity, 1
olefin selectivity from 2,4,4-trimethyl-2-pentanol using metal oxide catalysts selective for Hofmann or Saytzeff elimination; catalytic conversion of alcohols, 123
terminal:
metathesis of, catalysed by dichlorotetraphenoxotungsten(VI) compounds, 67
Ru 'melt'-catalysed oxonation of; syngas reactions, 99
Aluminium
selective enhancement of surface $Cu^+$ species in $CuO/ZnO/Al_2O_3$ catalyst by nitrous oxide decomposition, 17
Arenes
further studies on Pd complex-catalysed methoxycarbonylation of bis-(chloromethyl)arenes; successful use of inorganic bases yielding arenediacetic acid derivatives, 41
Aromatic compounds
further studies on Pd complex-catalysed methoxycarbonylation of bis-(chloromethyl)arenes; successful use of inorganic bases yielding arenediacetic acid derivatives, 41
metathesis of terminal alkenes catalysed by dichlorotetraphenoxotungsten(VI) compounds, 67

Barium
theoretical study of stability of Ba-exchanged Na-A type zeolites, 73
Bioluminescence
molecular mechanisms of bioconversion of chemical energy to light, 315

Cadmium
photocatalysed regeneration of NAD(P)H by CdS and $TiO_2$ semiconductors; applications in enzymatic synthesis, 21
Carbon dioxide
catalytic activation of, by metal complexes, 381
electrocatalytic reduction of, to methanol; mediation with metal porphyrins, 51
Carbonylation
of ethanol using homogeneous Ir complex catalyst; effect of ligands and reaction conditions, 87
methoxy-, Pd complex-catalysed: further studies on, of bis-(chloromethyl)arenes; successful use of inorganic bases yielding arenediacetic acid derivatives, 41
Chlorine
further studies on Pd complex-catalysed methoxycarbonylation of bis-(chloromethyl)arenes; successful use of inorganic bases yielding arenediacetic acid derivatives, 41

© Elsevier Sequoia/Printed in The Netherlands

metathesis of terminal alkenes catalysed by dichlorotetraphenoxotungsten-(VI) compounds, 67
Chymotrypsin molecule
α-; subglobular motion and proton transfer model in, 235
Cobalt
$Sn[Co(CO)_4]_4$, bifunctional catalyst of hydroformylation–acetalisation reaction, 11
Copper
selective enhancement of surface $Cu^+$ species in $CuO/ZnO/Al_2O_3$ catalyst by nitrous oxide decomposition, 17
synthesis of salicylaldehydes by copper- or iron-catalysed selective dehydrogenation of saligenols, 59
Cryoenzymology
and isotopic labelling; applications of, in detection of covalent complexes; NMR studies of enzyme mechanism, 139
Cytochrome P-450 models
with electron transfer activity; cyclohexene oxygenation, 1

Decomposition
nitrous oxide; selective enhancement of surface $Cu^+$ species in $CuO/ZnO/Al_2O_3$ catalyst by, 17
Dehydrogenation
copper- or iron-catalysed selective; synthesis of salicylaldehydes by, of saligenols, 59
Diffusional effects
in enzyme entrapping reactors, 7

Electrocatalytic reduction
of $CO_2$ to methanol; mediation with metal porphyrins, 51
Electronic mechanism
of long-range interaction in enzymes, 229
Electronic state
of iron atom in heme and heme protein molecular motion studied by Mössbauer spectroscopy, 179
Electron transfer
activity; cytochrome P-450 models with; cyclohexene oxygenation, 1
enzymatic; reagent Redox potential and pH effects on, 335
Electrostatic catalysis
in enzymes, 281
Energy differences
and their relevance to enzyme and intramolecular catalysis, 241
Enzyme(s)
binding of Kunitz and eglin c inhibitors to serine proteinases: thermodynamic, kinetic and molecular aspects, 297
chemical models of metallo-enzymes, 351
chemical models and nitrogenase, 363
diffusional effects in enzyme entrapping reactors, 7
dynamic and solvation effects of polar medium in enzymatic charge transfer reactions, 211
electronic mechanism of long-range interaction in, 229
electrostatic catalysis in, 281
high pressure studies of enzyme catalysis, 323
interdomain mobility of, and its functional role, 289
and intramolecular catalysis; energy differences and their relevance to, 241
kinetic power; basis of enzyme efficiency, specificity and evolution, 271
medium effects in enzyme specificity, 265
NMR studies of enzyme mechanism: applications of cryoenzymology and isotopic labelling in detection of covalent complexes, 139
papain action at neutral and alkaline pH regions; new method for determination of individual pre-steady-state parameters from steady-state kinetics, 343
photocatalysed regeneration of NAD(P)H by CdS and $TiO_2$ semiconductors; applications in enzymatic synthesis, 21
reagent Redox potential and pH effects on enzymatic electron transfer, 335
role of quantum tunnelling phenomena in catalytic power of, 187
site–site interactions and regulation of activity of inorganic pyrophosphatases, 307
structure and molecular dynamics of metalloenzymes studied by physical label methods, 129
theoretical chemistry studies on catalytic mechanism of liver alcohol dehydrogenase, 199

theoretical dynamic models of elementary act of enzyme reactions, 219
transition state structures in glycosidase catalysis; kinetic isotope effects and structure–reactivity parameters, 255
Ester
methyl formate; highly efficient catalyst system for isomerization of, to acetic acid, 117

Fluorescence quenching
and protein dynamics, 165

Glycosidase catalysis
transition state structures in; kinetic isotope effects and structure–reactivity parameters, 255

Heme
and heme protein molecular motion; electronic state of iron atom in, studied by Mössbauer spectroscopy, 179
Hofmann elimination
or Saytzeff elimination; olefin selectivity from 2,4,4-trimethyl-2-pentanol using metal oxide catalysts selective for; catalytic conversion of alcohols, 123
Hydroformylation
–acetalisation reaction; $Sn[Co(CO)_4]_4$, bifunctional catalyst of, 11

Inhibitors
Kunitz and eglin c; binding of, to serine proteinases; thermodynamic, kinetic and molecular aspects, 297
Iridium
carbonylation of ethanol using homogeneous Ir complex catalyst; effect of ligands and reaction conditions, 87
Iron
electronic state of iron atom in heme and heme protein molecular motion studied by Mössbauer spectroscopy, 179
synthesis of salicylaldehydes by copper- or iron-catalysed selective dehydrogenation of saligenols, 59
Isomerization
highly efficient catalyst system for, of methyl formate to acetic acid, 117
Isotope
kinetic, effects and structure–reactivity parameters; transition state structures in glycosidase catalysis, 255
Isotopic labelling
and cryoenzymology; applications of, in detection of covalent complexes; NMR studies of enzyme mechanism, 139

Liver alcohol dehydrogenase
theoretical chemistry studies on catalytic mechanism of, 199
Luminescence
bio-; molecular mechanisms of bioconversion of chemical energy to light, 315

Metalloenzymes
chemical models of, 351
structure and molecular dynamics of, studied by physical label methods, 129
Metal porphyrins
mediation with; electrocatalytic reduction of $CO_2$ to methanol, 51
Metathesis
of terminal alkenes catalysed by dichlorotetraphenoxotungsten(VI) compounds, 67
Methoxycarbonylation
Pd complex-catalysed; further studies on, of bis-(chloromethyl)-arenes; successful use of inorganic bases yielding arenediacetic acid derivatives, 41
Methyl formate
highly efficient catalyst system for isomerization of, to acetic acid, 117
Molecular dynamics
and structure of metalloenzymes studied by physical label methods, 129

NAD(P)H
photocatalysed regeneration of, by CdS and $TiO_2$ semiconductors; applications in enzymatic synthesis, 21
Nitrogenase
and chemical models, 363
Nitrous oxide decomposition
selective enhancement of surface $Cu^+$ species in $CuO/ZnO/Al_2O_3$ catalyst by, 17

Olefins: see Alkenes
Oxonation
  Ru 'melt'-catalysed, of terminal olefins; syngas reactions, 99
Oxygenation
  cyclohexene; cytochrome P-450 models with electron transfer activity, 1

Palladium
  further studies on Pd complex-catalysed methoxycarbonylation of bis-(chloromethyl)arenes; successful use of inorganic bases yielding arenediacetic acid derivatives, 41
Papain action
  at neutral and alkaline pH regions; new method for determination of individual pre-steady-state parameters from steady-state kinetics, 343
Phosphorous
  site–site interactions and regulation of activity of inorganic pyrophosphatases, 307
  stereoselective reduction of steroids with *in situ* prepared phosphine rhodium catalysts, 33
Photocatalysed regeneration
  of NAD(P)H by CdS and $TiO_2$ semiconductors; applications in enzymatic synthesis, 21
Porphyrins
  metal; mediation with; electrocatalytic reduction of $CO_2$ to methanol, 51
Protein
  electronic state of iron atom in heme and heme protein molecular motion studied by Mössbauer spectroscopy, 179
Proteinases
  serine; binding of Kunitz and eglin c inhibitors to; thermodynamic, kinetic and molecular aspects, 297
Protein dynamics
  and fluorescence quenching, 165
  and function, 155
Proton transfer model
  and subglobular motion in α-chymotrypsin molecule, 235
Pyrophosphatases
  inorganic; site–site interactions and regulation of activity of, 307

Quantum tunnelling phenomena
  role of, in catalytic power of enzymes, 187
Quenching
  fluorescence, and protein dynamics, 165

Reagent Redox potential
  and pH effects on enzymatic electron transfer, 335
Reduction
  electrocatalytic, of $CO_2$ to methanol; mediation with metal porphyrins, 51
  stereoselective, of steroids with *in situ* prepared phosphine rhodium catalysts, 33
Rhodium
  stereoselective reduction of steroids with *in situ* prepared phosphine rhodium catalysts, 33
Ruthenium
  syngas reactions: Ru 'melt'-catalysed oxonation of terminal olefins, 99

Salicylaldehydes
  synthesis of, by copper- or iron-catalysed selective dehydrogenation of saligenols, 59
Saligenols
  synthesis of salicylaldehydes by copper- or iron-catalysed selective dehydrogenation of, 59
Saytzeff elimination
  or Hofmann elimination; olefin selectivity from 2,4,4-trimethyl-2-pentanol using metal oxide catalysts selective for; catalytic conversion of alcohols, 123
Semiconductors
  CdS and $TiO_2$; photocatalysed regeneration of NAD(P)H by; applications in enzymatic synthesis, 21
Serine proteinases
  binding of Kunitz and eglin c inhibitors to; thermodynamic, kinetic and molecular aspects, 297
Site–site interactions
  and regulation of activity of inorganic pyrophosphatases, 307
Sodium
  theoretical study of stability of Ba-exchanged Na-A type zeolites, 73
Solvation effects
  and dynamic effects of polar medium in enzymatic charge transfer reactions, 211
Spectroscopy
  electronic state of iron atom in heme

and heme protein molecular motion studied by Mössbauer spectroscopy, 179
NMR studies of enzyme mechanism: applications of cryoenzymology and isotopic labelling in detection of covalent complexes, 139
Steroids
stereoselective reduction of, with *in situ* prepared phosphine rhodium catalysts, 33
Subglobular motion
and proton transfer model in α-chymotrypsin molecule, 235
Syngas reactions
Ru 'melt'-catalysed oxonation of terminal olefins, 99
Synthesis
enzymatic; applications in; photocatalysed regeneration of NAD(P)H by CdS and $TiO_2$ semiconductors, 21
of salicylaldehydes by copper- or iron-catalysed selective dehydrogenation of saligenols, 59

Thermodynamic aspects
and kinetic and molecular aspects; binding of Kunitz and eglin c inhibitors to serine proteinases, 297
Tin
$Sn[Co(CO)_4]_4$, bifunctional catalyst of hydroformylation–acetalisation reaction, 11
Titanium
photocatalysed regeneration of NAD(P)H by CdS and $TiO_2$ semiconductors; applications in enzymatic synthesis, 21
Transition state structures
in glycosidase catalysis; kinetic isotope effects and structure–reactivity parameters, 255
Tungsten
metathesis of terminal alkenes catalysed by dichlorotetraphenoxotungsten(VI) compounds, 67

Zeolites
Ba-exchanged Na-A type; theoretical study of stability of, 73
Zinc
selective enhancement of surface $Cu^+$ species in $CuO/ZnO/Al_2O_3$ catalyst by nitrous oxide decomposition, 17
